Height _____

Weight _____

A. Corner of mouth over poll to corner of mouth

B. Browband:

C. Noseband

D. Girth, where saddle sits

E. Turnback, from saddle to tail

F. Hip strap (to breeching)

G. Breeching (flank to flank)

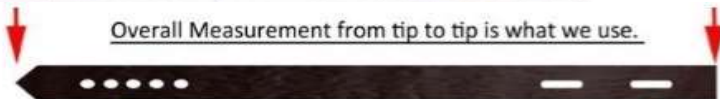

H. Breastplate (3" in front of saddle skirt)

I. Traces (overall length)

J. Full collar, if applicable: Length _____ Width _____

K. Throatlatch _____

Overall Measurement from tip to tip is what we use.

A few notes when measuring your horse for a harness.

Browband (B) We measure our browbands from tip to tip. Remember that the bridle crown is 1-1/2" wide on each side. The best way to do this is to have a 1" wide halter on your horse, have the halter back a 3/4" from the ear. Now take your measurement including the halter on each side.

Breastcollar-For Single (H) - When Properly fitted, the breastcollar will be approx.3" close to touching the saddle. The best way to get a good breastcollar measurement is to have a saddle and belly band (or Surcingle) on you horse, in the position where it fits the best. Then get your measurement.

Turnback E - Again, here it works best to have a saddle on your horse. Example why: Our horse saddle is 5" wide, Including the dee ring where the Turnback buckles in - if you measure without the saddle it may not be as accurate. Your measurement should be to the base of the tail

Breeching (G) - We like to see the Breeching come around in front of the Flank Line (see above drawing).
